White Painted ¹	Classic 9016	241, 240, 234

RAL CLASSIC

In 1927 the German RAL organization invented a collection of 40 colors. With tints constantly added to the collection, the collection was revised in 1961. From that moment the color system consists of 213 colors, which is still in use to this day.

RAL DESIGN

In 1993 RAL introduced a new color matching system, tailored to the needs of architects, designers and advertisers. The RAL Design collection includes 1,825 colors. The colors of RAL Classic and RAL Design do not intersect.

RAL is a European color matching system which defines colors for paint, coatings and plastics. The RAL color standard is administrated by the RAL Deutsches Institut für Gütesicherung und Kennzeichnung. 'RAL' is the abbreviation of 'Reichs-Ausschuß für Lieferbedingungen und Gütesicherung'.

¹ Perfect RAL Match

All other colours should be considered **Closest RAL Match** and are not related to the RAL colour systems.

USAGE GUIDELINES

RGB REFERENCES RGB references have been produced via 3rd party conversion software and are intended for desktop publishing and web-use only.

PERFECT RAL MATCH JJO colours perfectly matched to RAL colours. These colourways were typically conceived within the KBB industry due to the popularity of the pre-existing RAL colour.

CLOSEST RAL MATCH These RAL references have been produced for CAD reproduction by matching the 'closest' available RAL swatch to JJO door samples under typical lighting conditions.

TOUCH-UP PAINTS JJO advise against the use of RAL colours for touch-up paints. For all GLOSS and PAINTED colours, paint should be purchased directly from JJO to ensure the best possible match.

As with touch-up paints supplied by JJO, any "Perfect RAL Match" colours will not achieve an exact reproduction without specialist treatment, as the paint will be applied with different methods and under different conditions.

JJO ACCEPT NO LIABILITY FOR THESE GUIDELINES NOT BEING FOLLOWED.
